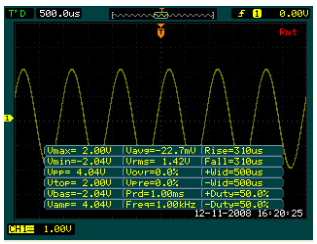
Automatically Measure 22 Waveform Parameters



Automatic measure

DS1000E, DS1000D series oscilloscopes can measure 20 types of waveform parameters automatically, which contains 10 voltage and 12 time parameters.

In cursor mode, users can easily measure by moving cursor. 3 types of cursor measurement are optional: Manual, Track and Auto.

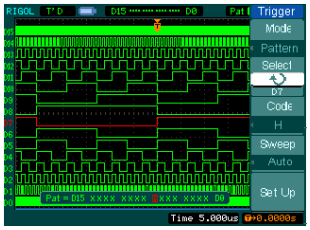
Multiple Trigger



Pattern trigger

Both DS1000E and DS1000D series contain abundant triggers:

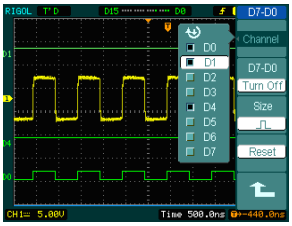
- Edge trigger, Pulse Width trigger, Video trigger, Slope trigger
- Alternate trigger, Pattern trigger (DS1000D), Duration trigger (DS1000D)

Especially the duration trigger is a new type from perfect combination of patten and pulse width trigger. Unique function of adjustable trigger sensitivity is good for filtering possible noise from signal in order to avoid false triggers.

16 Channels Logic Analyzer

Being equipped with 16 channels logic analyzer, DS1000D series mixed signal oscilloscopes achieve mixed signal measure coordinating with 2 analog channels.

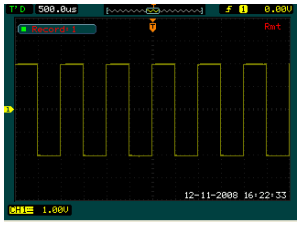
Each channel can be turned on or off independently, or in groups of 8(D7-D0 and D15-D8); also, you can set waveform size and threshold types or change the display position on screen for digital channel.



Digital channels setup

Waveform Recording

In virtue of waveform recording function from DS1000E and DS1000D, not only the outputs from two channels could be recorded, but also the waveforms outputted by Pass/Fail test could be easily recorded. Totally, up to 1000 frames of wavefoms can be recorded. Besides, users can playback and save the waveforms to get better waveform analyzing result.



Waveform recording

Pass/Fail Testing

The Pass/Fail function monitors the changes of signals by comparing whether the input signal is within the pre-defined mask. The testing results not only can be displayed on screen or output by isolated pass/fail port, but also can be alarmed according to turn on system sound.

UltraScope Software

RIGOL provides powerful PC application software, UltraScope, which enables to capture and measure waveforms, to perform local or remote operation, to save waves as ".bmp" format, to save files as ".txt" or ".xls" format as well as to print waveforms.

Key Lock function

Key Lock

This function is widely used in productions. All keys are locked except F1 to F5 and MENU ON/OFF in this mode.

To lock the keyboard, use menu; to unlock, correct password has to be input. Also, you can reset a new password if necessary.

Specifications

All specifications apply to DS1000E, DS1000D Series Oscilloscopes unless otherwise noted. To come up to these specifications, two conditions must be met firstly:

- The instrument must have been operated continuously for 30 minutes under the specified operating temperature.
- Do perform Self-Calibration operation through the Utility menu if the range of operating temperature variations up to or more than 5°C.

NOTE: All specifications are guaranteed unless where marked “typical”.
